**BillingPlatform**

BillingPlatform
Supports Automated Commercial Invoicing For Any Enterprise

Invoicing is one of the most important billing processes for any business. Without the right system, finance teams struggle to scale with enterprise growth and are burdened by manually intensive and inefficient billing tasks.

Often billing systems force finance teams to use boilerplate invoice templates that are confusing and overwhelming to customers. Time is wasted approving and printing invoices one-by-one when a better solution could handle this activity in bulk.

Using the comprehensive BillingPlatform solution, finance teams can convert disparate billing processes into powerful, unified monetization ecosystems. In one comprehensive, cloud-based application, finance executives empower their teams to automate commercial invoicing that fosters long-term growth and success.

BillingPlatform
AUTOMATED INVOICING

- Invoice Approval Processing
- Automated Print Queuing
- Event-based Invoicing Cycles
- Rate Override
- Customized Invoice Templates

BillingPlatform

BillingPlatform's
built-in invoicing capabilities enable enterprises to:

- **Customize unlimited invoice templates** with full graphical and branding capabilities -- clearly displaying all line items in a logical and digestible composition. With the flexible invoice template builder, enterprises can take customer service to new levels by allowing individual customers to dictate the format and grouping of invoices specific to their needs.

- **Process and approve invoices** manually or automatically based on custom configurations. Invoices can be searched by any component (ID, Account, Product, etc.) and approved individually or collectively with the bulk invoice approval tool.

- **Automate invoice print queuing** to FTP servers for all approved invoices. Invoice queues can be accessed through the web-based UI to monitor and troubleshoot the printing process, as well as manually download and print batches of invoices at one time.

- **Enable event-based invoicing cycles** with data collected from POS systems. Finance teams can group like charges into discrete invoices and define events that trigger closures and invoice deliveries. Invoicing cycles can be programmed to send invoices only when specific inventory leaves designated stores for just-in-time deliveries or other scenarios.

- **Override rates** so companies can use their predefined rates without having to take any unnecessary steps to bill for products that have already been priced and sold. With this feature, BillingPlatform users avoid any work related to recalculating charges, replicating entire product catalogs, and synchronizing millions of SKUs.

BillingPlatform's monetization and billing software solution transforms enterprises to embrace digital transformation. This dynamic, cloud-based platform adapts to every unique business model and pricing structure. BillingPlatform provides the most agile and comprehensive solution available including billing, revenue recognition, reporting, and other criticaL financiaL functions. With global customers across multiple industries including communication, transportation, technology, utilities, and media, BillinqPlatform processes millions of transactions and billions of dollars every year enabling enterprises to grow revenue, reduce costs, and improve overall customer experience.
